

Carlos Gaspar Delgado Morales

Seven quantum stories develop a fun framework built with the surreal characters residing in "The Villa of Singularity", a small imaginary town of the Andalusian mountain range. Satirical humour, science, and Andalusian are all cheerfully caricatured... which guarantee us many great moments of reading.

Synopsis

The plot of these short tales, focuses on a series of imaginary villages of the Andalusian mountains with "The Villa of the singularity" among them. This fictional town pays tribute to the mystery of physics and to the singularity of the satirical characters that star in this work. Seven stories with a common thread, but also with its own identity. The reader will be led through worlds full of gags and absurd humour.

Science, especially quantum physics, appears caricatured in each chapter and offers a counterpoint to the exaggerated world and rural characters that are recreated in each one of the seven stories. Laughter is assured for the readers of this book...

Biography

Carlos Gaspar Delgado Morales, was born in Setenil de las Bodegas (Cádiz) in 1968. He lives between the bustle of Seville, the calmness of the Malaga sierra and the polyglot beaches of the COsta del Sol. With a degree in business studies, he has developed his professional career in a leading business group. He is also a vocational writer who has written several stories and has always been seduced by the world of fiction. It is his first published book.

Sales pitch

Narrative in humorous and nonsensical tone, full of gags, which will generate laughter and smiles in the readers.

The author has borrowed the styles of Mingote, Wenceslao Fernández Flores, Ramón de la Serna and Monty Python. He develops a story set in deep Spain with constant references to quantum physics and mechanics.

The characters are described as burlesque. They express themselves with irreverence, gall, a carefree attitude and an Andalusian accent. The work gain authenticity through its use of a good narrative structure.

The key to understanding this book is the absurd humour and surrealism mixed with the use of exaggeration that is typical in Andalusia.

Quantum physics appears caricatured as counterpoint to the supposed intellectual slovenliness of the rural world that the work recreates.
